

SWFT Social Media Agent

AI-powered content agent for SWFT. Generates high-retention posts for Instagram, Facebook, and LinkedIn using live web search — then saves them to Google Drive for approval before posting.

Stack

- Anthropic API (Claude Sonnet + web search)
 - Google Drive API (staging + approval layer)
 - Node.js / ES modules
-

Setup

1. Install dependencies

```
npm install
```

2. Configure environment

```
cp .env.example .env
```

Add your `ANTHROPIC_API_KEY` to `.env`.

3. Run without Google Drive first

```
node index.js generate
```

Content will save as a local JSON file so you can see it immediately.

Google Drive Setup (when ready)

1. Go to [Google Cloud Console](#)

2. Create a new project → Enable **Google Drive API**
 3. Create a **Service Account** → Download `credentials.json`
 4. Place `credentials.json` in the root of this folder
 5. Share your target Google Drive folder with the service account email
 6. Copy the folder ID from the Drive URL and add to `.env`
 7. Set `GDRIVE_ENABLED=true` in `.env`
-

Commands

```
# Auto-generate weekly content (finds trending topics via web search)
node index.js generate

# Generate content about a specific topic
node index.js generate "why contractors lose $50k a year to missed calls"

# Generate a reply to a comment
node index.js reply instagram "How much does this cost?" "SWFT AI agent for home
```

How It Works

1. **Web Search** — Agent searches for trending topics in trades/home services/small biz AI
 2. **Content Generation** — Applies SWFT brand voice + hook frameworks to write platform-specific posts
 3. **Image Prompts** — Generates an AI image prompt for each post
 4. **Google Drive** — Saves each post as a separate file in a weekly folder
 5. **Approval Layer** — You review Drive folder, delete what you don't want
 6. **Posting** — Coming next: posting agent reads approved files and publishes to each platform
-

Output Format

Each generated post includes:

- Full post copy (platform-optimized)
 - Hashtags
 - Image generation prompt
 - Best time to post
 - Hook type used
-

Coming Next

- Meta Graph API posting (Instagram + Facebook)
- LinkedIn API posting
- Scheduler (run every Monday automatically)
- Comment monitoring + auto-reply pipeline
